# Camunda Cycle Innovator Connector

This is the Innovator Connector for Camunda Cycle. It contains the implementation of a connector which persists and synchronizes BPMN models between the a Trisotech repository and another location, like a file repository.

ProxyUsername and proxyPassword are the log-in credentials to connect with the Innvoator-Repository.

InnolsrvPort and innolsrvHost are define the path to the corresponding Licenseserver.

InnoRemotePort and InnoRemoteHost are needed to establish a connection to the Plug-In that manages the communication with the Innovator-Client. This Plug-In can be obtained by requesting it from MID Gmbh

How to use it?

1. Checkout the project
2. Build the project
3. Deploy the jar file to a cycle distribution (see [installation guide](#))
4. Update the *connector-configuration.xml* file
5. Deploy the CamundaInnovatorAdapter.exe to the Innovator folder
6. Start CamundaInnovatorAdapter.exe and Cycle, goto Connectors and add a new Example Connector
